ERRATUM:
Specification of output for the IDT Preprocessing and Location Estimator as required for the Double Star analysis (NDAC/LO/076)
by L Lindegren

Equations (2a)-(2b) in the paper above are unfortunately wrong. The exponent at the end of the equations should be -1, not -1/2. The correct expressions are:

\[ \bar{\beta}_4 = R \left( \bar{\beta}_4 \bar{\gamma}_4 + \bar{\beta}_5 \bar{\gamma}_5 \right) (\bar{\beta}_4^2 + \bar{\beta}_5^2)^{-1} \]  \hspace{1cm} (2a)

\[ \bar{\beta}_5 = R \left( \bar{\beta}_4 \bar{\gamma}_5 - \bar{\beta}_5 \bar{\gamma}_4 \right) (\bar{\beta}_4^2 + \bar{\beta}_5^2)^{-1} \]  \hspace{1cm} (2b)
